UltraSONIC L5210 SERIES SECURITY SYSTEM
Quick Guide to User Functions

Full User Guide Available Online: This Quick Guide describes the most frequently used features and functions of your system. For full details of all features, please refer to the User Guide for your specific model at http://www.security.honeywell.com/hsc/products (see LYNX Touch L5210 Security System User Guide P/N 800-19975 or higher). The full version User Guide is also available from your installer upon request.

Congratulations on your ownership of a Honeywell Security System. This system provides:
• A powerful combination of deterrents and real-time monitoring of your residence.
• At least one keypad which provides control of system and displays status.
• Various sensors for perimeter and interior burglary detection
• Smoke and Carbon Monoxide detectors designed to provide early warning in case of fire.
• Your system may also be programmed to automatically send alarm and status messages to a Central Monitoring Station.

System Basics
The following is a list of some of the most common features and functions of your system:
• Several modes of burglary detection: Stay, Away, Instant.
• Bypass feature lets you bypass selected zones while leaving the rest of the system armed.
• Change mode setting by opening the protected doors and windows while the system is disarmed.
• Fire and carbon monoxide detection are always active (if installed) and an alarm sounds if a fire or carbon monoxide condition is detected.
• Panic keys (if programmed) let you manually initiate fire, police and medical alarms using the keypad.
• 4-digit security codes are used in conjunction with keypad commands to perform system functions.
• Each user (up to 32) can be assigned a different security code. The user’s security code assigns him to various “zones,” which are specific areas of detection (e.g., front door, kitchen window, etc.).
• Zone numbers (points of detection) are displayed at the keypad when an alarm or trouble condition occurs.
• Two-way voice allows the Central Station to listen, talk or conduct a two-way conversation with individuals at the premises. See the full User Guide for details.
• Follow me reminder announcements allow the panel to dial a number and deliver status system messages. See the full User Guide for details.
• A Scheduling feature can be programmed to automatically perform certain functions (e.g., arm the system) at a predetermined time each day. See the full User Guide for details.

Entry/Exit Delays
• Entry Delays give you time to disarm the system when you arrive at the designated exit door(s). You must disarm the system before the entry delay period ends, or an Exit Delay Error alarm (keypad beeps during the entry delay period, reminding you to disarm the system).
• Exit Delays give you time to exit the system to leave through the designated exit door(s) without setting off an alarm. If programmed, a slow beeping will sound during the exit delay period, which lasts for 10 seconds, which then changes to fast beeping (alerting you to the end of exit delay). If you cannot leave within this delay time period, you should stop, disarm the system, and start over to avoid a false alarm. See your installer for delay times. See the full User Guide for details on Exit Delays.

Notes on Burglary Detection
• The system must be armed before the burglary detection can sense intrusions.
• To arm your system, select the desired arming key or icon and enter a valid code.

Notes on Fire and CO Detection
• Your fire alarm system (if installed) is on 24 hours a day, for continuous detection. In the event of an emergency, the smoke and heat detectors sound their alarms, triggering a loud, interrupted pulsed sound from the control and any external sounder(s) (if installed).
• You can silence the alarm at any time by selecting the “Home” key and entering a valid code.
• Carbon monoxide (CO) detectors, if installed, provide continuous detection. If a high level of carbon monoxide is detected, an interrupted pulsed sound occurs at the control and the detector(s). Immediately move to a spot with fresh air available, preferably outdoors. From a safe area, call your security service provider for further instructions. To silence the control sounding, select the “Home” key and enter a valid code. To silence the detector, refer to its instructions.

Notes on Burglary Detection (Continued)
• You may arm your system using the Quick Arm feature. To arm your system, select the desired arming key or icon followed by the Quick Arm icon. You do not need to enter your security code.
• To disarm the system, select the Disarm icon and enter your security code.
• If your system is connected to a Central Monitoring Station, an alarm message is also sent (delayed 30 seconds by default to reduce false alarms).
• To stop the alarm sounding, simply disarm the system.
• Memory of Alarm: When an alarm condition occurs, the keypad displays the number(s) of the zone(s) that caused the problem, and the type of alarm. Clear the Memory of Alarm display by selecting the “Home” key and entering a valid code.

Notes on Fire and CO Detection
• Your fire alarm system (if installed) is on 24 hours a day, for continuous detection. In the event of an emergency, the smoke and heat detectors sound their alarms, triggering a loud, interrupted pulsed sound from the control and any external sounder(s) (if installed).
• You can silence the alarm at any time by selecting the “Home” key and entering a valid code.
• Carbon monoxide (CO) detectors, if installed, provide continuous detection. If a high level of carbon monoxide is detected, an interrupted pulsed sound occurs at the control and the detector(s). Immediately move to a spot with fresh air available, preferably outdoors. From a safe area, call your security service provider for further instructions. To silence the control sounding, select the “Home” key and enter a valid code. To silence the detector, refer to its instructions.

Setting the Date and Time
NOTE: The system must be disarmed before date/time can be set.
You can set the time and date using the following:
• Use the “<” or “>” to select the correct month/year.
• Select the correct day. Use the “<” to advance.
• Select “Clear” then enter the correct time
• Select AM/PM then select “Save” or use the “<” to advance.
• Select correct Time Zone
End Day Savings Time Settings.
• If required select Day Light Saving Start/End
• Select “Save”
Checking System or Zone Status/Bypassing Zones

Check System Status

Mode
Press these icons... What happens

Check System Status
Displays system status.

Check System Status
Displays all faulted zones.

Select the "Zones" icon key when you want to arm your system with one or more zones intentionally unprotected. The system must be disarmed first.

Bypass Zones

Mode
Press this icon... What happens

Bypass Zones
When finished, the zones will be displayed along with zone status.

The system will not allow fire zones to be bypassed. Zones are automatically unprovisioned when the system is disarmed.

To display bypassed zones prior to arming, select the "Zones" icon.

Zone Status

The following icons will be displayed on the Zone Status screen along with zone status information when a zone has been faulted, bypassed or in alarm:

Display Definition Display Definition Display Definition

Alarm Ready Trouble (red)

Zone Status

Arming the System

before arming, close all perimeter doors and windows and make sure the "Ready to Arm" message is displayed. Select the specified icon or key and enter the 4-digit Security Code. The system will beep three times to confirm the arming. After arming, leave the premises through an entry/exit door during the exit delay period and be sure the door is closed to avoid causing an alarm.

Mode
Press these keys or icons... When to use an arming mode and what happens

Stay
Used when you want to arm the system with persons staying inside (or if you have pets that are moving throughout the premises).

Arms perimeter zones; interior zones left disarmed.

An alarm sounds if any protected window or non-entry/exit door is opened.

Instant Stay
Used when staying inside and you do not expect anyone to use an entry/exit door.

Same as Stay Mode, except entry delay is off.

An alarm sounds same as Stay mode, and sounds upon opening entry/exit doors.

Away
Used when nobody is staying inside (including pets).

Arms the entire system (interior and perimeter).

An alarm sounds if a protected window or any door is opened, or if any movement is detected inside.

Quick Arming
If programmed, you can press the Quick Arm button (when the keypad appears) in place of your security code when arming the system.

Disarming the System and Silencing Alarms

The "Silence" icon is used to disarm the system, silence alarm or trouble sounds, and clear memory of alarm displays. Select the icon or key and enter the 4-digit Security Code.

Mode
Press these keys or icons... What happens

Disarm and Silence Alarms
System is disarmed and all alarms are silenced.

To silence a Fire Alarm or Carbon Monoxide, simply enter an "OFF" sequence.

Panic Keys

Your system may have been programmed to use special keys/icons to manually activate emergency (panic) functions as follows:

To activate a Panic Function: Press and hold down the Panic key for at least 2 seconds, then select the Desired Panic function icon as indicated below:

Panic Function Icon Sends this Signal* With this Sounding

Police Alarm Silent Alarm OR Audible Alarm To audible alarm; displays "Police Ready to Arm," indicating that a silent alarm has been initiated. OR A loud, steady alarm at panel at external siren (if installed); displays "Alarm 99 Police"

Medical Alarm Audible Alarm Steady alarm sound at panel, but not at external siren (if installed); displays "Alarm 96 Medical"

Fire Alarm Fire Alarm Severe (sounding) sound at panel and external siren (if installed); displays "Fire Alarm 99"

All panic functions send signals to the Central Monitoring Station, if connected.

Testing the System

Using the Test Mode each detection point to be checked for proper operation. Testing should be conducted weekly to ensure proper operation.

The keypad sounds a single beep every 30 seconds as a reminder that the system is in the Test mode. Alarm messages are not sent to your Central Station during testing.

If a problem is experienced with any detection point (no confirming sounds, no display), call for service immediately.

1. Disarm the system and close all protected windows, doors, etc. The "Home" key should be left if green all zones are intact.

2. At the Master Menu Screen Select the "Test" icon followed by the "Walk Test" icon.

3. Listen. The sounder should beep once the "Walk Test Home to Quit" should be displayed. The control sounds a single beep every 30 seconds while the test is in progress. If the sounder does not sound, CALL FOR SERVICE.

4. Fault zones. Open each protected door and window in turn and listen for three beeps from the keypad followed by the zone's voice descriptor. Each faulted detection point should appear on the display. The display clears when no motion is detected. Note that if wireless motion detectors are used, there is a 3-minute delay between activations to conserve battery life.

5. Walk in front of any interior motion detectors (if used) and listen for three beeps. Each detector should appear on the display when it is activated. The display clears when no motion is detected.

6. Test all smoke detectors, following the manufacturer’s instructions.

7. When all detection points have been checked and restored (closed), there should be no zone numbers displayed.

8. Exit test mode by selecting the "Home" key and entering a valid code.

System Settings

Your system settings including volume level (message playback, system announcements, and status beeps) and display brightness and contrast can be adjusted as desired. Additionally, you can turn On/Off the Chime, Telephone Ringer and/or System Voice Announcements. A cleaning icon is also available via the system settings.

Note: To enable or disable the Chime mode the system must be disarmed.

Mode
Press this key or icon... What happens

Voice OR Chime OR Ringer Mode

Voice Enables or disables the Voice announcement of system status.

Chime Alerts you to the opening of a perimeter door or window while the system is disarmed.

Ringer Enables or disables the Telephone Ringer.

Adjust Brightness OR Volume

Slide the button to Adjust the display brightness or volume system.

Clean the Touchscreen

The touchscreen becomes inactive for 15 seconds then returns to the settings screen and becomes active.

Security Codes

Your installer assigned a Master Code that is used to perform all system functions. Security codes can be assigned for up to 32 users. Only the Master User can assign security codes to users.

To Add/Edit/Delete User Codes: Select the "Tools" icon on the second page of the Security Home Screen, then enter your Master User Code and follow the steps below.

Function
Press this icon... Perform the following...

Change Master User Code
Add Security Code

Select "Master", then "Edit".

Select "User Code".

Enter a new 4-digit Master Code.

Select "Done", then "Save".

Select "Add new".

Select "Name", then "Clear".

Type a User Name, then "Done".

Select "User Code".

Enter a new 4-digit User Code.

Select "Done", then "Save".

Select "Name" or "User Code".

Select "Done", then "Save".

Select "Name" or "User Code".
