ADEMCO VISTA SERIES VISTA-21iP / VISTA-21iPSIA

Security Systems

Programming Guide

TO ENTER PROGRAMMING MODE (using an alpha keypad connected to the control):

- A. POWER UP, then press [*] and [#] at the same time, within 50 seconds of powering up (this method must be used if *98 was used to exit program mode). OR
- **B.** Initially, key: Installer Code (4 + 1 + 1 + 2) plus 8 + 0 + 0.

PROGRAMMING MODE COMMANDS

Task	Command/Explanation		
Go to a Data Field	Press [*] + [Field Number], followed by the required entry.		
Entering Data	When the desired field number appears, simply make the required entry. When the last entry		
	for a field is entered, the keypad beeps three times and automatically displays the next data		
	field in sequence. If the number of digits that you need to enter in a data field is less than the		
	maximum digits available (for example, the phone number fields "41, "42), enter the desired		
Deview a Data Field	data, then press [*] to end the entry. The next data field number is displayed.		
Review a Data Field	Press [#] + [Field Number].		
Deleting on Entry	Data will be displayed for that field humber. No changes will be accepted in this mode.		
	Press [*] + [Field Number] + [*]. (Applies only to helds *40 thru 40, 94, and pager helds)		
Initialize Download ID	Press #96. Initializes download ID and subscriber account number.		
Reset Factory Defaults	Press *97. Sets all data fields to original factory default values.		
Zone Programming	Press *56. Zone characteristics, report codes, alpha descriptors, and serial numbers for 5800		
	RF transmitters.		
Function Key Programming	Press *57. Unlabeled keypad keys (known as ABCD keys) for special functions		
Zone Programming	Press *58. Same options as *56 mode, but with fewer prompts. Intended for those familiar		
(Expert Mode)	with this type of programming, otherwise *56 mode is recommended.		
Output Device Mapping	Press *79. Assign module addresses and map individual relays/powerline carrier devices		
Output Programming	Press *80. 4229 or 4204 Relay modules, Powerline Carrier devices, or on-board triggers		
Zone List Programming	Press *81. Zone Lists for relay/powerline carrier activation, chime zones, pager zones, etc.		
Alpha Programming	Press *82. Zone alpha descriptors		
IP/GSM Programming	Press *29. For programming the IP/GSM options.		
Exit Program Mode with	Press *98. Exits programming mode and prevents re-entry by: Installer Code + 8 + 0 + 0.		
installer code lockout	To reenter programming mode, the system must be powered down, then powered up. Then		
	use method A above. See field *88 for other *98 Program mode lockout options.		
Exit Program Mode	Press *99. Exits programming mode and <i>allows</i> re-entry by: Installer Code + 8 + 0 + 0 or		
	method A above.		

SPECIAL MESSAGES

OC = OPEN CIRCUIT (no communication between Keypad and Control).

EE or **ENTRY ERROR** = ERROR (invalid field number entered; re-enter valid field number).

After powering up, **AC**, **dl** (disabled) or **Busy Standby** and **NOT READY** will be displayed after approximately 4 seconds. This will revert to a "**Ready**" message in approximately 1 minute, which allows PIRS, etc. to stabilize. You can bypass this delay by pressing [#] + [0].

If **E4** or **E8** appears, more zones than the expansion units can handle have been programmed. The display will clear after you correct the programming.

This Device	Uses Address	Reports as TT	Enabled By

KEYPAD OPTIONS *189-*196

KEYPAD NOTES:

- 1. Options for keypad 1, address 16 are set by the factory and cannot be changed.
- . Each keypad must be assigned a unique address. Keypads programmed with the same address will give unpredictable results.
- 3. If using Remote Services (IP/GSM feature), one of the keypad addresses may be used for limited Remote Services features, though a physical keypad is not installed. See *29 Menu Mode section for enabling Remote Services.

Configurable Zone Types Worksheets

Configurable zone types 90 and 91 can be programmed via downloader software or from a keypad using data fields*182-*185. Configurable zone types 92 and 93 can only be programmed using the downloader software.

Programming Configurable Zone Type options involves making 10 entries in data field *182 for zone type 90 and field *184 for zone type 91, where each entry represents the sum of the values of the various options shown in the tables below. Use fields *183 and *185 to program Contact ID report codes for these zone types.

ENTRY 1 (See note 5 for RF zones) ENTRY 2 (See note 5 for RF zones)

Entries for Fields *182 and *184				
Entry	Zone Type 90 (field *182)	Zone Type 91 (field *184)		
1				
2				
3				
4				
5				
6				
7				
8				
9				
10				

To calculate the value for each entry:

Simply add the values of the selected options in each of the entry's columns (one option per column). For example, to program Entry 2 for "alarm response to short," "auto restore on," but not a "vent zone," enter 5 ("1" for alarm short + "4" for auto restore yes + "0" for vent zone no).

NOTES:

- 1. Do not use the "fault delay" option with a configurable zone type if it is set for an entry or exit delay, otherwise unpredictable results may occur.
- 2. To create an interior type zone, select "respond as interior zone type" (entry 8. interior type = yes), and set zone response to "fault" in entries 3-4 to ensure fault displays; do not set as "normal," "alarm," or "trouble."
- 3. Do not set fire zones to respond as a "fault" (entries 1-6), otherwise faults will not display unless the [*] key is pressed.
- 4. 4219/4229 modules must use EOLRs or unpredictable results may occur.
- 5. RF Zones: The "open" option in entries 1, 3, and 5 is not applicable for RF zones. Use the "intact EOL" option for normal RF zone conditions and "shorted" for offnormal RF zone conditions.
- 6. a. Zone-Doubling/Double-Balanced: A short on either zone of a zone-doubled pair or on a double-balanced zone causes a tamper condition.
 - b. For double-balanced zones, this entry must be "0."
 - c. For zone-doubled zones, both zones of the doubled pair must be assigned the same response to a short.

ENTRY 9			ENTRY 10	
Alarm Sounds	Use Bell Timeout	Respond as Fire Zone	Trouble Sounds	Chime when Chime Mode On
0 = none	0 = no	0 = no	0 = none	0 = no
1 = steady keypad	4 = yes	8 = yes	1 = periodic beep	4 = yes
2 = steady bell and keypad	see fields *32, *33	see zone type 09; see note 4	2 = trouble beeps	
3 = pulsing bell and keypad		,	, -	
Entry 9 = alarm sounds + bell timeout + fire zone			Entry 10 = troubl	e sounds + chime

*56 Zone Programming Menu Mode

(press *56 while in Program mode)

The Zone Programming Worksheet is on page 18.

For each of the following prompts, make the desired entry, followed by the [*] key to accept the entry.

Refer to the Installation and Setup Guide for detailed explanations for each prompt.

SET TO CONFIRM?

0 = no; 1 = yes (See XMIT TO CONFIRM prompt later in this section.) We recommend that you confirm the programming of every transmitter.

ENTER ZN NUM.

01-64, 91, 92, 95, 96, 99

To quit, enter 00 to quit (returns to data field mode).

SUMMARY SCREEN:

System displays a summary of the entered zone's current programming. Press [*] to continue.

ZONE TYPE

ZUNEITFE		
00 = Not used	07 = 24-Hr Audible	20 = Arm-STAY*
01 = Entry/exit #1	08 = 24-Hr Aux	21 = Arm-AWAY*
02 = Entry/exit #2	09 = Fire	22 = Disarm*
03 = Perimeter	10 = Interior w/Delay	23 = No Alarm Resp
04 = Interior Follower	12 = Monitor Zone	24 = Silent Burglary
05 = Trouble Day/Alarm Night	14 = Carbon Monoxide	77 = Keyswitch
06 = 24-Hr Silent	16 = Fire w/Verify	81 = AAV Monitor
		Zone
*5800 button-type transmitters	only	90-91 = Configurable

PARTITION 1. 2. or 3-common

REPORT CODE

1-9, 10 for 0, 11 for B, 12 for C, 13 for D, 14 for E, 15 for F For Contact ID®, enter any non-zero entry as the first digit to enable reporting for this zone.

To disable the report code for this zone, enter 00.

HARDWIRE TYPE

Appears only for zones 02-08. Zone 1 is automatically set for EOL

operation. Enter the desired hardwire type: 0 = EOL; 1 = NC; 2 = NO; 3 = zone doubling (ZD); 4 = double-balanced (DB)

RESPONSE TIME

For hardwired zones 01-08. Enter the desired response time for this zone: 0 = 10mSec; 1 = 350mSec; 2 = 700mSec; 3 = 1.2 secs (see field *174). NOTE: If zone doubling is being used, the response time selected for zones 02-08 automatically applies to each zone's associated doubled zone.

INPUT TYPE

Skipped for zones 2-8, and for zones 10-16 if zone-doubling enabled. Enter the input type: 2 = AW (Aux wired zone); 3 = RF (supervised RF); 4 = UR (unsupervised RF); 5 = BR (unsupervised button type)

NOTE: To change the input type of a previously programmed wireless device to a wired zone, you must first delete the transmitter's serial number.

INPUT S/N

Enroll the transmitter's serial number and loop number as follows:

 a. Transmit two open/close sequences (for button-type transmitters, press and release the button twice, waiting about 4 seconds before pressing the button the second time).

OR

b. Manually enter the 7-digit serial number printed on the label of the transmitter. Press the [*] key to move to the "L" position, then enter the loop number.

Use the [A] (Advance) and [B] (Back) keys to move the cursor forward and back within the screen. Pressing the [C] (Copy) key will insert the previously enrolled serial number, if desired (used when programming a transmitter with several input loops).

To delete an existing serial number, enter 0 in the loop number field. The serial number will change to 0's. If 0 was entered in error, simply re-enter the loop number or press [#], and the serial number will return to the display.

2. Press [*] to continue. The system now checks for a duplicate serial/loop number.

If no duplicate is found, the display shows the serial number and loop number.

3. Press [*] to continue to confirmation screen.

(prompts continued in next column)

XMIT TO confirm

Appears if you answered "Yes" at the "Set to Confirm" prompt. Activate the loop input or button that corresponds to this zone. Press [*] to continue.

If the serial/loop number transmitted does not match the serial number entered, a display showing the entered and the received serial/loop numbers appears.

If so, activate the loop input or button on the transmitter once again. If a match is not obtained, press the [#] key twice and then enter (or transmit) the correct serial number.

Press [*] to continue

If the serial number transmitted matches the serial number entered, the keypad will beep 3 times and a summary display will appear, showing that zone's programming. An "s" indicates that a transmitter's serial number has been enrolled.

Press [*] to accept the zone information and continue.

PROGRAM ALPHA?

Press 1 if you want to program descriptors for the zone now, and refer to the *82 Descriptor Programming section for procedure. To program descriptors later, enter 0 (no).

Press [*] to return to the ENTER ZN NUM prompt.

*58 Expert Zone Programming Mode

(press *58 while in Data Programming mode)

SET TO CONFIRM?

Select whether you want confirmation of wireless device enrollment. (See "XMIT TO CONFIRM" prompt later in this section.) We recommend that you confirm the programming of every transmitter.

SUMMARY SCREEN

Zn	ZT P	RC	HW:	RT
01	09 1	10	EL	1

(Typical for Zone 1, initial summary screen)

(Typical for entered zone number; zone 10 in this example)

System displays summary of zone 1's current programming. Enter the zone number being programmed, then press [*]. A summary screen for that zone is displayed, along with any current programming values, and the cursor moves to the Zone Type location. The cursor then automatically moves to the next locations after each entry is made.

Special Function Keys:

- [A] (Advance) and [B] (Back) keys on the keypad move the cursor within the screen.
- [C] (Copy) key will insert the previous zone's attributes, if desired.
- [D] key starts the Wireless Key Programming Templates menu (see Wireless Key Programming Templates section that follows this section).

Sequentially enter Zone Type (ZT), Partition (P), and Report Code (RC; 0-9 only; use *56 menu mode for hex codes), then Hardwire Type (HW) and Response Time (RT) for basic wired zones 1-8 or Input Device Type (IN) for zones 9 and higher (Loop Number [L] is programmed at the INPUT S/N prompt).

See *56 Zone Programming Menu Mode section described earlier for entry values.

 $\ensuremath{\mathsf{Press}}\xspace [*]$ to save the programming and continue. If needed, press the [#] key to back up without saving.

- For wireless devices (input types RF, UR, BR), continue to the INPUT S/N (serial number/loop number) and XMIT TO CONFIRM prompts described earlier in the *56 Zone Programming Menu Mode section. When done, the display returns to the initial summary screen prompt to let you program the next zone.
- For wired devices, the display returns to the initial summary screen prompt to let you program the next zone.

To Quit, enter 00 at the zone number location and press [*].

Wireless Key Programming Templates (press the [D] key from *58 Menu mode Summary Screen)

This procedure programs the wireless keys, but a key is not active for arming/disarming until it is assigned to a user number (see *System Operation* section, Assigning Attributes Command in the Installation Instructions).

TEMPLATE ?

Enter desired template number 1–6 (see chart below), then press [*] to continue.

To exit the Template screen, press [#]. The system returns to the *58 Menu mode Summary Screen.

TEMPLATE SUMMARY

L	01	02	03	04					
Т	23	22	21	23					

The selected template is displayed. The top line represents loop numbers, the bottom line represents each loop's zone type.

Press [*] to accept template and continue.

PARTITION

Enter the partition (1, 2) in which the key is to be active. Press [*] to continue.

Wireless Key Predefined Default Templates

ENTER START ZONE The system displays the lowest zone number of the highest available consecutive 4-zone group. To start at a different zone number, enter the zone desired, and press [*]. If the system has four consecutive zones beginning with that zone, the zone number is displayed. If not, the system will again display a suggested zone that can be used. If the required number of consecutive zones is not available at all, the system will display "00". Press [*] to accept. Continue to the INPUT S/N (serial number/loop number) and XMIT TO CONFIRM prompts described earlier in the *56 Menu Mode section. IMPORTANT: When confirmed, the key is not active for arming/disarming until it is assigned to a user number (using the assigning attributes command, attribute "4"). See System Operation section in Installation Instructions. When done, the keypad beeps three times and the display returns to the ENTER START ZONE prompt to let you enter the starting zone for the next

wireless kev.

*57 Function Key Programming (press *57 while in Data Programming mode)

The Function Key Worksheet is on page 19.

PRESS KEY TO PGM

Press the desired function key to be programmed, A-D, then press $\left[\ast\right]$ to continue.

When done, press 0 to exit this mode and return to data field mode. **NOTE:** A key programmed as a function key is no longer available to be used as an end-user macro key or panic key.

PARTITION

Enter the partition (1-3) in which this function key will be active.

KEY "A" FUNC

Enter the desired function for this key:

- 00 = For the Function key selected, the functions are pre-defined as follows (default):
 - If A selected = Zone 95 (emergency key, same as [1] [*] pair)
 - If B selected = Zone 99 (emergency key, same as [*] [#] pair)
 - If C selected = Zone 96 (emergency key, same as [3] [#] pair)
 - If D selected = Single-button paging (continued in next column)

KEY "A" FUNC (continued)

- 01 = Single-button paging (sends a 999-9999 message to pager)
- 02 = Display time
- 03 = Arm AWAY (reports as User 00 if closing reports are enabled)
- 04 = Arm STAY (reports as User 00 if closing reports are enabled)
- 05 = Arm NIGHT-STAY (reports as User 00 if closing reports enabled) 06 = Step Arming (arms STAY, then NIGHT-STAY if enabled, then AWAY)
- 07 = Output Device Command (for device programmed as system operation type 66 in *80 Menu Mode)
- 08 = Communication Test (sends Contact ID code 601)
- 09 -12= Macro Keys 1-4 respectively (defined by [#] [6] [6] command)

Press [*] to continue; returns to key number prompt with the next function key letter displayed.

***79 Output Device Menu Mode**

(press *79 while in Programming mode)

The *79 Device Mapping Worksheet is on page 19.

ENTER OUTPUT NO.

01-18 = relays/X-10

[*] to continue

OUT NORM LOW (appears only for triggers 17/18)

- 0 = no (standard default); sets the output level normally high
- 1 = yes; sets the output normally low (can be used for resetting 4-wire smoke detectors)
- [*] to return to Output Number prompt

OUTPUT TYPE

0 = delete; 1 = relay (skip to "B" prompt); 2 = Powerline Carrier device (skip to "A" prompt)

[*] to continue

A: UNIT No. (if X-10 was selected as Output Type) Enter the unit code (01-16, set at the device). [*] to return to the Output Number prompt continue

B: MODULE ADDR (if relay was selected as Output Type) Enter the predefined address for this module (07-15; see Table of Device Addresses on page 2).

Make sure the module's DIP switches are set to the selected address. NOTE: If using Multi-Mode (IP/GSM feature), select one of the 4204 addresses, though a physical 4204 module is not installed. If using 2-4204 multi-mode option, the second 4204 address is automatically one number higher than the first one selected. Make sure these addresses are not used by physical 4204 modules that may be installed. See *29 Menu Mode section for enabling Multi-Mode.

[*] to continue

REL POSITION (actual relay number on module)

For 4204 modules, relay numbers are 1-4. For 4229 modules, relay numbers are 1-2.

NOTE: If using multi-mode, program the relays to trigger on those system events to be sent to the user's email address. See *29 Menu Mode section for enabling Multi-Mode.

[*] to return to the Output Number prompt for programming the next device

***80 Output Function Menu Mode**

(press *80 while in Programming mode) The Output Definition Worksheet is on page 20.

OUTPUT FUNCT. #

Enter the output function number to be defined: 01-48 [*] to continue: 00 = exit

[].0			,	0/at					
SUMMARY SCREEN									
01 A E P Trig									
200	0	0	_	71 -00					

' This screen displays a summary of the current output programming A = Output Action; E = Triggering event; P = Partition; Trig = Trigger type Question mark indicates the device shown has not been mapped. Use *79 Menu mode to map the device

[*] to continue ACTIVATED BY

- 0 = delete (deletes the output function and any previous programming); a confirmation prompt appears.
 - To delete this output definition, press 1. If you do not want to delete this output, press 0.
- 1 = zone list (go to "A" prompt); 2 = zone type (go to "B" prompt); 3 = zone number (go to "C" prompt)

Press [*] to continue

"A" (if zone list was selected)

ZN LIST

Enter the desired zone list number (01-08). At the ENTER EVENT prompt. enter the zone list event that will activate this output (0 = restore: 1 = alarm: 2 = fault: 3= trouble)

Press [*] to continue and skip to the "Output Action" prompt.

"B" (if zone type was selected)

ENTER ZN TYPE

Enter the desired zone type. See list below *80 Worksheet for zone types. At the PARTITION prompt, enter the partition in which this zone type will occur (0 = any partition; 1 = partition 1; 2 = partition 2; 3 = partition 3). Press [*] to continue and skip to the "Output Action" prompt.

"C" (if zone number was selected)

ENTER ZN NO.

Enter the desired zone number, then press [*] to continue. At the ENTER EVENT prompt, enter the zone event that will activate this output (0 = restore: 1 = alarm/fault/trouble)

Press [*] to continue to the OUTPUT ACTION prompt

*80 Menu Mode (continued)

OUTPUT ACTION

0 = off; 1 = Close for 2 seconds; 2 = Close and Stay Closed; 3 = Continuous Pulse 1 sec on and 1 sec off 4 = Change Device State; 5 = Duration 1 (see data field *177); 6 = Duration 2 (see data field *177)

Press [*] to continue.

ENTER OUTPUT NO.

Enter the device output number (programmed in *79 Menu Mode) you want associated with this output. 01-16 = output no.; 17-18 = on-board triggers Press [*] to continue.

SUMMARY SCREEN

A summary screen appears showing the programmed settings. Press [*] to return to OUTPUT FUNCTION NUMBER prompt.

*81 Zone List Menu Mode

(press *81 while in Programming mode)

The Zone List Worksheet is on page 19.

ZONE LIST NO.

Enter the zone list number (01-12) to program (or 00 to exit this mode). Press [*] to continue.

ENTER ZN NUM.

Enter each zone number (01-64) to add to the zone list, followed by pressing [*] (example, 01*, 02*, 03*).

Press 00 to continue

IMPORTANT: Do not include fire zones in zone lists that are used to STOP device actions.

DEL ZN LIST?

0 = don't delete list; current zone list remains saved

1 = delete this zone list; All zones in the zone list will be deleted. [*] to continue

DELETE ZONE?

0 = don't delete zones; save the entire zone list and return to the Zone List No. prompt

1 = go to next prompt to delete zones [*] to continue

ZN TO DELETE?

Enter each zone (01-64) to be deleted from the list, following each with [*]. 00 when done to return to the Zone List No. prompt.

*82 Alpha Descriptor Programming

PRE-DEFINED DESCRIPTORS

PROGRAM ALPHA

0 = no (quit Alpha mode)

1 = vesPress [*] or [#] to continue.

CUSTOM WORDS

0 = no (continue to descriptor programming)

1 = yes (go to custom word programming)

Press 0 to program standard alpha descriptors. The system will then display the descriptor for zone 1.

To program custom words, press 1 (custom words are described later). Press [*] to continue.

* ZN 01

Descriptor screen for zone 1 appears. To program a descriptor (up to 3 words) for a zone, do the following:

- 1. Press [*] plus the desired zone number (existing descriptor, if any, is displayed), then press [*] plus the zone number again (flashing cursor appears).
- 2. a. Press [#] plus the 3-digit number from the Alpha Vocabulary List on page 11 for the first word.
- b. Press [6] to accept the word and move the cursor for the next word.
- 3. Repeat steps 2a and 2b for the second and third words (if used).
- 4. When all words have been entered, press [8] to save the descriptor for that zone. The flashing cursor disappears.
- 5. Repeat steps 1-4 to assign a descriptor for the next zone.
- 6. When all descriptors have been entered, press [*] + 0 + 0 (or simply press [#]) after the last descriptor has been saved to return to the PROGRAM ALPHA? prompt.

Enter 0 (no) at the prompt to exit this mode and return to Data Field mode.

*82 Alpha Descriptor Programming (continued)

ADDING CUSTOM WORDS (up to 10 words)

For custom words, the keys have the following functions:

- [4] moves cursor one space to the left.
- [6] moves cursor one space to the right
- [8] saves the new word in the system's memory.
- 1. Select Custom Word mode (enter 1) when the prompt "CUSTOM WORD ?" is displayed.
- Enter the number (01–10, or 11, 12, 13 for partition descriptors– see below) of the custom word or word string to be created, corresponding to index numbers 245 - 254 respectively. A cursor appears at the beginning of the second line.
- **NOTE:** Custom words 8, 9, and 10 are "reminder words" that can be programmed to display using Scheduling Mode.

3. Refer to the Character (ASCII) Chart on the next page.

Press [#], followed by the two-digit entry for the first letter you would like to display (e.g., # 6 5 for "A"). The cursor moves to the right, in position for the next character.

To delete a character, simply enter the SPACE character (#32) at the unwanted character's location.

- Repeat Step 3 to create the desired word(s). Each word can be a maximum of 10 characters (except custom message/partition descriptor word numbers 11, 12, and 13, which can be a maximum of 16 characters).
- 5. When the word is complete, press the [8] key to save the custom word(s) in the vocabulary list and return to the "CUSTOM WORD ?" display.
- Repeat Steps 1–5 for other custom words to be entered. To change a custom word, just overwrite it. When all words have been programmed, enter 0 at the "CUSTOM WORD ?" prompt to return to the Program Alpha prompt. Enter 0 again to exit Descriptor mode.

To Assign Partition/Custom Message Descriptors, use Adding Custom Words procedure, but: use the following word numbers in step 2: 11 = partition 1; 12 = partition 2; 13 = common lobby

ALPHA VOCABULARY LIST (For Entering Zone Descriptors)

	055	DISPLAY											254	Custom Word #10

Note:

Dete: Bulleted (•) words in **boldface type** are those that are also available for use by the 4286 Phone Module. If using a Phone module, and words other than these are selected for Alpha descriptors, the module will not provide annunciation of those words. Italicized words followed by an asterisk indicate those words supported by the 6160V/6150V Voice Keypads

*29 Internal Device Menu Mode (for Programming IP and GSM Module Options)

This mode is for programming the Internet connection (IP) and GSM Module configuration, collectively referred to as the Internal Device. **NOTE:** The Internal Device is automatically set to address 3 and cannot be changed.

IMPORTANT: The use of the IP connection or the VISTA-GSM module requires an AlarmNet–I account. Please obtain the account information from the central station prior to programming this module.

The following section describes the programming of the internal device options using an alpha keypad. Alternatively, these options can be programmed via the AlarmNet Direct website. After programming is complete, **the control must be registered** with AlarmNet (via the control's RJ45 Internet connection). Refer to the Registration with AlarmNet section for procedures.

Using an Alpha Keypad as a 7720P Programming Tool

When programming IP/GSM features (with *29 menu mode), the alpha keypad mimics the functions of the 7720P Programming Tool. See figure at right and table below for 7720P key functions. Each key has two possible functions: a normal function and a SHIFT function.

Normal functions: The numeric values labeled directly on the keys and the left-hand functions shown in diagram on the ABC keys. To perform a normal key function, simply press the desired key.

SHIFT functions: Those functions shown in diagram above the numerical keys and the right-hand functions shown on the ABC keys. To perform a SHIFT key function, press SHIFT key (D key), then press the desired function key (shift function is indicated by the lit READY LED).

Normal and SHIFT key Functions While in *29 Menu Mode

7720P Emulation Template for Alpha Keypads

Key	Normal Key Function	SHIFT Key Function
(A) = BS/ESC	[BS]: Press to delete entry	[ESC]: Press to quit Program Mode
	Also, can reset EEPROM defaults [†]	
(B) = ↓/↑	$[\downarrow]$: Scroll down programming	[[↑]]: Scroll up programming
(C) = N/Y	[N]: Press for "NO" answer	[Y]: Press SHIFT-Y for "YES" answer
(D) = SHIFT	Press before pressing a SHIFT key function. Will light READY	LED. LED goes out once a key is pressed. Press again for
	each SHIFT function desired.	
1/A	[1]: For entering the number 1	[A]: Used for entering C.S. ID number
2/B	[2]: For entering the number 2	[B]: Used for entering C.S. ID number
3/C	[3]: For entering the number 3	[C]: Used for entering C.S. ID number
4/D	[4]: For entering the number 4	[D]: Used for entering C.S. ID number
5/E	[5]: For entering the number 5	[E]: Used for entering C.S. ID number
6/F	[6]: For entering the number 6	[F]: Used for entering C.S. ID number
7/S	[7]: For entering the number 7	[S]: Press to display diagnostic status
8/T	[8]: For entering the number 8	[T]: Press to send TEST messages
9/X	[9]: For entering the number 9	[X]: Press to reset the IP/GSM
[*] / SPACE	[*]: Used to select programming options	[SPACE]: Not used
0	[0]: For entering the number 0	
[#] / ENTER	[#] / ENTER: Press to accept entries	No SHIFT function

[†] Active only when the "REVIEW?" prompt is displayed

Internal Device (IP and GSM) Default Values

The programming default values for *29 Menu Mode are listed in the Table below

	OPTION	STANDARD DEFAULT VALUE	ACTUAL ENTRY
1	Internal Device	IP	
2	Primary City ID	??	
3	Primary CS ID	??	
4	Primary Sub ID	????	
5	Supervision	24 Hours	
6	GSM Rollover Y/N	N (if GSM enabled)	
7	GSM 24Hr Tst Y/N	N (if GSM enabled)	
8	Old Alarm Time	10 Minutes	
9	IP Fault Time	60 Minutes	
10	GSM Fault Time	60 Minutes (if GSM enabled)	
11	Notify Panel Of	Neither Fault (if IP and GSM enabled)	
12	Use DHCP Y/N	Y (if IP or IP/GSM enabled)	
13	NIC IP Address	255.255.255.255 (if DHCP not used)	
14	Subnet Mask	255.255.255.255 (if DHCP not used)	
15	Gateway IP Addr	255.255.255.255 (if DHCP not used)	
16	DNS IP Addr.	255.255.255.255 (if DHCP not used)	

Status and Contact ID Reporting Codes

The Internal Device (IP/GSM) sends status messages to the control panel for network connectivity failures. Trouble messages are displayed on the keypad as "Check 103," with status displayed as "LngRng Radio" followed by a 4-digit keypad display status code, defined below.

Keypad Display Status Codes

to your proping change course					
CODE	DESCRIPTION				
0000	Control panel lost communication with internal device				
0005	internal device has lost contact with AlarmNet-G network				
000F	internal device is not registered; account not activated				
0019	GSM module shut down				
0400	internal device Power-on reset				

** reports only if IP and GSM enabled

Contact ID Codes (as displayed at 685) sent to CS via IP/GSM					
CODE	DESCRIPTION				
E339 C803	Power-on reset				
E350 C951	Primary communication path failure (Ethernet)**				
R350 R951	Primary communication path restore (Ethernet)**				
E350 C952	Secondary communication path failure (GSM)**				
R350 C952	Secondary communication path restore (GSM)**				
E355 C000	Module lost ECP communication with control				
R355 C000	Module restore ECP communication with control				
E353 C103	Long range transmitter fault trouble				
R353 C103	Long range transmitter fault restore				

Using *29 Menu Mode to Program IP/GSM Options

Entering *29 Program Mode

Press *29 while in Data Field Programming mode. The following prompts appear.

Enable INT IP/GSM?

0 = No, not using either IP or GSM; 1 = Yes, using IP and/or GSM module [*] to continue. NOTE: Default = 1 (IP and/or GSM)

IMPORTANT: If using an external communication device, see the VISTA-GSM Module Installation section of the Installation and Setup Guide (Inadequate Signal Strength paragraph) for physical installation of an external communication device. When complete, enter 1 at this prompt and enter 1-Prog at the next prompt. Then program and register the external device using the Installation and Setup Guide included with the external communication device.

Programming/Diagnostics Select

1= Prog (program the IP/GSM options)

- 2 = Diag (enter diagnostic mode)
- 0 = Quit; returns to data field programming mode

Internal Device Programming Prompts

The keys used to select and enter options now follow 7720P keypad emulation. Refer to the table on the previous page for detailed key functions. The following is a summary:

- [*] = scroll the options of a particular prompt
- [#] = accept the entry and move to the next prompt
- [A] = backspace or shift-[A] for escape
- [B] = scroll to next prompt or shift-[B] scroll to previous prompt
- = answer No or shift-[C] answer Yes to prompt [C]
- DI = shift key

Internal Device Selection

Select the type of IP and/or GSM module usage (press [*] to scroll choices): Disabled (none); IP only; GSM module only; IP & GSM [#] to continue

NOTE IF USING GSM ONLY OPTION: For registration purposes, the internal device must first be set for IP & GSM (and the control must be connected to the Internet via the RJ45 connector). Follow the prompts to program appropriate values and use the default settings for the IP specific prompts. After the control is registered (see Registering the Control with AlarmNet paragraph later in this section), return to this prompt and set for GSM only.

Multi-Mode (email reporting)

This feature is available only after authorization for it is set via the web-based programming tool on the AlarmNet Direct website.

Multi-mode emulates 4204 Relay Module outputs to send up to four (4204 sourced) or up to eight (2-4204 sourced) reports of system events to the user via email (email address is entered at the AlarmNet Direct website). Use the AlarmNet Direct website to customize event titles, if desired. If enabled, a multimode address must be entered in the next prompt.

Use *79/*80 Menu modes to program each emulated output to trigger a desired system event that, upon occurrence, will be sent to the user's email address. Select the desired multi mode option:

Disabled = no email reporting of events

- 4204 Sourced = up to four types of events reported (relay numbers 1-4 report as events 1-4 respectively)
- 2-4204 Sourced = up to eight types of events reported (first module's relay numbers 1-4 report as events 1-4 respectively; second module's relay numbers 1-4 report as events 5-8 respectively)

To scroll the choices: [*] key scrolls forward; [backspace] key scrolls backward [#] to continue

- NOTES:
- 1. Multi-mode has not been evaluated by UL.
- 2. Multi-mode (email notification) is intended as a convenience for the user, and does not replace Central Station reporting of critical events (alarms, troubles, etc.)

Multi-Mode Address

This prompt appears if Multi Mode is enabled.

12-15 =emulated 4204 Relay Module address.

If using "2-4204-sourced," the address of the second module is automatically assigned an address one higher than the first module's address

NOTE: A 4204 Relay module address is required for multi-mode purposes, but an actual 4204 Relay module is not used.

Primary City ID

NOTE: Account information is provided by the central station administrator. 01-99 (decimal) = 2-digit primary city code

Primary CS ID

Enter the primary central station's system ID number, 01-FE (HEX)

Primary Sub ID

Enter the 4-digit customer account number, 0001-9999 (decimal)

Remote Access

This feature is available only after authorization for it is set via the web-based programming tool on the AlarmNet Direct website.

- Remote Services allow the end user to access their security system from a computer via the remote services website. Most system functions can then be performed
- [Y] = use remote services
- [N] = do not use remote services

[#] to continue

Keypad Address (for Remote Access)

This prompt appears if remote access is enabled.

For enhanced remote access features, choose an AUI address. If no AUI addresses are available (all four AUIs are being used), choose an available standard keypad address (some remote access features will be unavailable). 1, 2, 5, 6 = emulated AUI address 17-23 = emulated standard keypad address

NOTE: An AUI or standard keypad address is required for remote access purposes, but an actual AUI device or keypad is not used.

Supervision

The supervising station must hear from the IP/GSM at least once during the supervision period. AlarmNet transmits a communications failure alarm to the central station if the supervision message is not received within the period.

This selection sets the supervision timing for one of the following values: if using IP only (not for GSM usage)

- if using IP and/or GSM
- 30 day
 - 24-hours
 - None (no supervision)
- US UL Line (90 Sec)
- CN UL Line Lv1 3 (3 Min)

• US UL Line (6 Min)

- CN UL Line Lv1 4 (90 Sec)
- CN UL Line Lv1 5 (75 Sec) 1 hour

To scroll the choices: [*] key scrolls forward; [backspace] key scrolls backward [#] to continue

GSM Rollover Y/N

Appears only if IP&GSM is selected as Internal Device option.

- [Y] = all messages (including AlarmNet network supervisory messages) are
- sent over the GSM network in the event of an Internet failure
- = all messages (except AlarmNet network supervisory messages) are sent [N] automatically over the GSM network in the event of an Internet failure

GSM 24Hr Tst Y/N

Appears only if IP&GSM is selected as Internal Device option.

[Y] = have a message sent once a day to verify GSM operation. A "secondary communication path loss" message is generated if the message is not successfully delivered.

[N] = disable 24hr test

Old Alarm Time

The old alarm time sets how long an undeliverable alarm is retried for delivery to AlarmNet. If the message is not validated, it is retried until the old alarm time is reached or the message is validated. The choices available are:

- 10 Minutes 4 Hours
- 15 Minutes • 8 Hours
- 30 Minutes • 12 Hours
- 1 Hour • 24 Hours
- 2 Hours

To scroll the choices: [*] key scrolls forward; [backspace] key scrolls backward [#] to continue

IP Fault Time

Appears only if IP or IP&GSM is selected as Internal Device option.

01-99 = time delay (in minutes) before the control notifies the central station that there is a loss of contact with the network over the Ethernet (IP) connection.

0 = no delay (valid only If using IP only)

Must be two (2) minutes for UL installations.

GSM Flt Time

Appears only if GSM or IP&GSM is selected as Internal Device option. 01-99 = time delay (in minutes) before the control notifies the central station that a loss of contact with AlarmNet network has occurred.

0 = no delay (valid only if using GSM only, Must be two (2) minutes for UL installations.

Notify Panel Of

Appears only if IP&GSM is selected as Internal Device option. Select from the following choices:

Neither Fault

values.

- 13 -

Use DHCP

[#] to continue

Review prompt.

Both IP and GSM must fail before fault code is sent (status code 4005 displayed); panel receives primary and secondary path failure messages. No message sent if only one or the other path fails.

To scroll the choices: [*] key scrolls forward; [backspace] key scrolls backward [#] to continue

NOTE: IP failure will always be sent to the central station as Primary Path Failure, and GSM failure will always be sent as Secondary Path Failure.

IP address information prompts

The following prompts appear only if IP or IP&GSM is selected as Internal Device It is recommended to use dynamically allocated IP addresses, but if fixed IP

addresses are desired, contact your network administrator for the appropriate

information. Note that a valid IP address must be entered in each prompt before

the system continues to the next prompt. Entries cannot be left with the default

[Y] = have the IP addresses dynamically allocated (recommended), skip to

[N] = use fixed IP addresses; continue with next prompt

NIC IP Address [255.255.255.255]

Enter the 4-part IP address for this device, separating each part with a space ([*] key, displayed as periods). [#] to continue

Subnet Mask [255.255.255.255]

Enter the 32-bit address mask used to indicate the portion (bits) of the IP address that is being used for the subnet address, separating each part with a space ([*] key, displayed as periods). [#] to continue

Gateway IP Addr [255.255.255.255]

Enter the 4-part IP address assigned to the Gateway, separating each part with a space ([*] key, displayed as periods). If unused set to 0.0.0.0. [#] to continue

DNS IP Addr [255.255.255.255]

Enter the 4-part IP address assigned to the DNS (Domain Name System) server, separating each part with a space ([*] key, displayed as periods). If unused set to 0.0.0.0. [#] to continue

Review? (and Exit *29 Menu mode or Reset Defaults)

You can review the *29 Menu mode options to ensure that the correct entries have been made. When satisfied, select [N] to exit *29 Menu mode. To review prompts or exit *29 Menu mode:

- [Y] = review prompts and entries, starting with Internal Device. Use the up/down arrow keys to scroll through the program fields without changing any of the values. If a value requires change, simply type in the correct value. When the last field is displayed, the "REVIEW?" prompt appears. [N] = Exit *29 menu mode and return to data field programming mode. The
- prompt briefly displays "DONE" before returning to data field mode prompt "Enter * or #.'
- [#] to accept Y or N selection (# alone exits same as N)

To reset *29 Menu mode defaults:

- Press [ESC] at the Review prompt to display the "Set Defaults" prompt.
- [Y] = reset *29 menu mode options to factory values; if selected, all
- programmed *29 Menu mode options are reset to the factory settings [N] = cancel reset defaults function

Programming IP/GSM Options via AlarmNet Direct Website

To program the IP/GSM options via the AlarmNet Direct website (if you are already signed up for this service), go to: https://services.alarmnet.com/AlarmNetDirect/userlogin.aspx

If you are not signed up for this service, click on "Dealer Sign-Up.

Log in and follow the on-screen prompts.

- Please have the following information available:
- 1. Primary City ID (two-digit number)
- 2. Primary Central Station ID (two-digit hexadecimal number)
- 3. Primary Subscriber ID (four-digit number)
- 4. MAC ID and MAC CRC number (located on the outside of box and on label inside module) or MIN number of the device you are replacing

5. Mode of operation of existing module if replacing a "C" series radio.

After programming is complete, you must transfer the data to the module and the module must be registered. Refer to the Registration section for details.

IP/GSM Diagnostic Commands (*29 Menu Mode)

Diagnostic commands can be used to quickly view your Internet and GSM connectivity settings and options. For each command press the [shift] key and then the designated command key. For example, press [shift] then [1/A] to display the software revision screen.

To enter Diagnostic mode:

- 1. Press *29 while in data field programming mode.
- 2. Enter "1" at the "Enable IP/GSM" prompt then press [*].

Select "2" (Diag) at the next prompt.
 Enter the desired command at the "Sel Key Command" prompt.

For subsequent commands, enter the next command at the current screen. To exit Diagnostic mode, press ESC (shift-[A]).

Prompt Kov Function

Key	Frompt	Tunction
[A]	Internal IP/GSM x.x.xx mm/dd/yy	Software Revision "x.x.xx" indicates the installed software Revision. Mm/dd/yy indicates month, day and year of the revision.
[B]	MAC XXXXXXXXXXX MAC CRC yyyy	MAC Address "xxxxxxxxxx" indicates the IP/GSM's unique identification number. Yyyy indicates the 4 digit MAC CRC needed to enroll the device in dealer direct. [*] to continue to SCID.
	SCID XXXXX XXXXX XXXXX XXXXX	SCID Display Only if GSM or IP/GSM enabled. Displays the identification number assigned to the SIM card (SCID) in this device. [*] to continue to IMEI.
	IMEI XXXXXXXX XXXXXX X	IMEI Display Only if GSM or IP/GSM enabled. Displays the identification number assigned to the GSM module in this device. [*] returns to MAC Address.

IP/GSM Diagnostic Commands (continued)

Rey	Frompt	Function
[C]	Mon 01 Jan 2006 05:48:39 am	Time Retrieves the current date and time from the AlarmNet network in Greenwich Mean Time (GMT). This display confirms that the module is in svnc with network
[D]	Physical Link Good/Bad	Physical Link Only if IP or IP/GSM enabled. Indicates whether the device has detected a physical connection to the internet. [*] to continue to NIC IP address.
	NIC IP Address xxx.xxx.xxx	IP Information Displays Displays the IP address assigned to this device. [*] to continue to subnet mask.
	Subnet Mask xxx.xxx.xxx	Displays the 32-bit address mask used to indicate the portion (bits) of the IP Address that is being used for the subnet address. [*] to continue to gateway IP.
	Gateway IP Addr xxx.xxx.xxx	Displays the IP Address assigned to the Gateway. [*] to continue to DNS server IP.
	DNS Serv IP xxx.xxx.xxx	Displays the IP Address assigned to the DNS (Domain Name System) server. [*] to continue to encryption test.
	Encryption Test AES Passed!	Performs a self-test of the AES encryption algorithm. [*] to continue to DHCP.
	DHCP OK	DHCP (Dynamic Host Configuration Protocol) indicates server is performing satisfactorily. [*] returns to Physical Link prompt.
(E)	PriRSSI GPRS REG -xxxdbm x x	GSM Status Displays Only if GSM or IP/GSM enabled. PriRSSI – Primary Site RSSI level in dbm GPRS – GPRS Service availability where "x" can be: "Y" if GPRS is available "N" if GPRS is Not available REG – Registration status from GSM module where "x" can be: N – Not Registered H – Registered Home S – Searching D – Registration Denied R – Registered Roaming ? – Unknown Reg. State [*] to continue to next screen.

IP/GSM LED Functions

IP (web) Network LED Functions

LED Color	LED	Description
Top Green	Ethernet Link/Activity	ON – link is active; OFF – no link
Middle Green	Link Speed	ON – 100 MB/S; OFF – 10 MB/S
Yellow	Network Collision	BLINK – collision detected; OFF – normal

IP/GSM Status LED Functions

LED Color	LED	Description
Green	Status	ON – control is NOT registered with AlarmNet; OFF – control is registered with AlarmNet.
		FAST BLINK – Download session with Compass in progress.
		SLOW BLINK – In unison with yellow LED – Registration in progress.
Yellow	Message	ON – Message transmission pending.
		QUICK PERIODIC BLINK - Normal
		FAST BLINK – Message waiting for network ACK.
		SLOW BLINK – In unison with green LED – Registration in progress.
Red	Fault	ON – No contact with network; OFF– Normal.
		SLOW BLINK – Loss of communication with the panel (ECP fault).
		FAST BLINK – No network contact AND loss of communication with the panel.
All		FAST BLINK – In unison with the RSSI Bar Graph LEDs – Hardware Error. Call the
		AlarmNet Technical Assistance Center

Signal Strength and Status LED Meanings

Color	Label	Indication
Red	RSSI	ON = signal strength (RSSI) display
		OFF = status display
Yel (2)	mode	OFF = module operating in ECPmode
Green	Web	web connection status
		ON = connected to web
		OFF = no web connection
Green	GPRS	GPRS service availability
		ON = GPRS service available
		FLASH = GPRS in use
		OFF = no GPRS service (messages sent via SMS)
Green	GSM	network carrier registration status
		ON = registered with network carrier, no second site available
		FLASH = registered with network carrier and second site available, excellent RSSI
		BLINK = registered with network carrier and second site available, acceptable RSSI
		SLOW BLINK = registered with network carrier and second site available, low RSSI
		OFF = control not registered with network carrier

ion with AlarmNet

ust be registered with AlarmNet before internet communication 1) can occur.

ne control must be connected to the Internet.

ontrol by using one of these methods:

phone -222-6525

- eed the following information:
- ID and MAC CRC number (found on the PCB label).
- oriber information (provided by the central station), including a ode, CSID, and a subscriber ID.
- tructed to do so, triple-click the Test switch to complete the n

h Alpha Keypad using *29 Menu mode

- Menu mode, select Diagnostic mode, then press Shift then [^] y followed by the B key). The registration message is sent ring" displayed) and the control waits for the acknowledgment.
- ion SUCCESS" displayed, indicating successful registration.

h Test Switch on control's PCB (triple-click)

switch three times.

- GSM Status LEDs: The Message (yellow) LED and the een) LED will blink slowly in unison while registration is in
- istration is complete, the Status (green) LED goes out.

h AlarmNet Direct Website

via AlarmNet Direct Website, please go to: ces.alarmnet.com/AlarmNetDirect/userlogin.aspx.

ollow the on-screen prompts.

the following information available:

- ity ID (two-digit number provided by central station)
- entral Station ID (two-digit hexadecimal number provided by tion)
- ubscriber ID (four-digit number provided by central station)
- nd MAC CRC number (located on outside of box and on label 's PC board).

t signed up for this service, click on "Dealer Signup" from the to gain access to the Honeywell web-based programming.

-Up Direct Link:

es.alarmnet.com/AlarmNetDirectP Sign-Up.

nstructed how to proceed upon completing the sign-up form. n-up per dealer is required. Once an initial user is established, gins may be created by that user.

ntrol is registered, you may log out of the AlarmNet Direct

Setting Schedules (Installer Code + [#] + [6] [4]) NOTES:

- The master code can only access schedules 01-16 and events 00-07.
- System clock must be set before schedules can be used.
- Programmed schedules do not take effect until the next scheduled "start" time. (e.g., if programming a schedule time window for 8AM to 5PM, the schedule does not take effect until 8AM after the schedule has been programmed.)

ENTER SCHED NO.

- 01-16 = end-user schedules; 17-32 = installer-only schedules [*] to continue.
- To Quit, enter 00.

ENTER EVENT

- 00 = clear event
- 01 = Relay On/Off
- 02 = User Access
- 03 = Latch Key Report to Pager (sent to all pagers in the user's partition; message sent is 777-7777. User must be enabled for paging and system must be armed before reporting can occur.)
- 04 = Forced Stay Arming ⁽Forced bypass is automatically enabled regardless of setting in field *23)
- 05 = Forced Away Arming ⁽Forced bypass is automatically enabled regardless of setting in field *23)
- 06 = Auto Disarm
- 07 = Display "Reminder"
- 10 = Display custom words (if selected, system displays custom words 8, 9, and 10 at defined time. Can be used as installer's reminder message to the end user); programmable by installer only
- 11 = Periodic Test Report (see key commands in **Test Report Code**, data field *64, to quickly set periodic test reporting intervals); programmable by installer only

[*] to continue.

DEVICE NUMBER (for event 1 relay on/off) 01-18; [*] to continue.

Setting The Real-Time Clock

The Real-Time Clock must be set before completing the installation.

NOTE: All partitions must be disarmed before the Real-Time Clock can be set.

- 1. Master Code + [#] + [6] [3]
- 2. Press [*] when the time/date is displayed. A cursor appears under the first digit of the hour. *To move cursor ahead, press [*]. To go back, press [#].*
 - Enter the 2-digit hour setting, followed by the 2-digit minute setting, then press [1] for PM or [2] for AM.
 - Enter the last two digits of the current year, followed by the 2-digit month setting and the 2-digit day setting.
- 3. To exit, press [*] when cursor is at the last digit, or wait 30 seconds.

Uploading/Downloading Via The Internet

This control supports upload/download programming capability via the Internet by using the AlarmNet network and Compass downloading software. The control must be connected to the Internet (via the on-board RJ45 connector or VISTA-GSM module), have all IP features programmed (*29 Menu mode), and be registered with AlarmNet.

The following is required at the Downloading Office:

- Broadband Internet Access and Broadband (Cable/DSL) Modem
- Broadband (Cable/DSL) Router (optional, if connecting more than one device to the Internet)
- Computer running Compass Downloading Software version that supports Internet upload/download for this control.

To perform upload/download functions:

- 1. Connect the computer to the Internet and start the Compass downloading software.
- 2. Open the control's account, then select the Communications function and click the **Connect** button.
- 3. At the Connect screen, check that the control's MAC address is entered and the TCP/IP checkbox is checked.
- 4. Click Connect. The Internet connection to the control is made automatically via AlarmNet.
- 5. Once connected, use the Compass downloading software as normal to perform upload/download functions.

GROUP NUMBER (for event 2 user access)

1-8; [*] to continue.

PARTITION (for events 3-7,10,12)

0 = all partitions; 1 = partition 1; 2 = partition 2; 3 = common [*] to continue.

START

01-12 = hour; 00-59 = minute; 0 = AM; 1 = PM; to select days, position the cursor under the desired days using the [*] key to move forward, then press "1" to select the day. [*] to continue.

STOP (for events 1 relay on/off; 2 user access; 3 latch key report) See START for entries. [*] to continue.

REPEAT

0 = do not repeat; 1 = repeat schedule weekly; 2 = repeat schedule biweekly (every other week); 3 = repeat schedule every third week; 4 = repeat schedule every fourth week (28 days) [*] to continue

RANDOMIZE (for events 01 and 11)

0 = no; 1 = yes

If selected, the scheduled start and stop times will vary within 60 minutes of the "hour" time. For example, if a schedule is set to start at 6:15pm, it will do so the first time 6:15pm arrives, but on subsequent days it will start anytime between 6:00 and 6:59 p.m.

NOTE: Do not use the random option if the start and stop times are within the same "hour" setting, otherwise unpredictable results may occur (e.g., the randomized stop time may occur before the start time).

 $\left[*\right]$ to continue and return to ENTER SCHED NO. prompt to program the next schedule.

***80 OUTPUT DEFINITIONS**

Fill in the required data on the worksheet below and follow the programming procedure in the installation manual as you enter the data during the displays and prompts that appear in sequence.

- Notes: 1. For Relays, 4229 and 4204 devices are programmed in *79, *80, and *81 modes.
 - 2. For Powerline Carrier devices (plcd), field *27 must be programmed with a House Code.
 - 3. Tampers of expansion units cannot be used to operate devices.

 - Code + # + 8 + NN Key Entry stops Device
 - ** Use 0 (any) for Partition No. (P) entry.
 - *** Or at Disarming, whichever occurs earlier.
 - † Use *57 Menu mode to assign the function key. ++ Duration is set in program field *177.
 - ††† Device action not used for these choices.

5800 Series Transmitter Input Loop Identification

All of the transmitters illustrated have one or more unique factory assigned input (loop) ID numbers. Each of the inputs requires its own programming zone (e.g., a 5804's four inputs require four programming zones).

For information on any transmitter not shown, refer to the instructions accompanying that transmitter for details regarding loop numbers, etc.

UL NOTE: The following transmitters are not intended for use in UL installations: 5802MN, 5802MN2, 5804, 5804BD, 5814, 5816TEMP, 5819, 5819WHS & BRS, and 5850.

The 5827BD and 5800TM can be used in UL Listed Residential Burglar installations.

UL NOTICES

- 1. Entry Delay No. 1 and No. 2 (fields *35, *36) cannot be greater than 30 seconds for UL Residential Burglar Alarm installations, and entry delay plus dial delay should not exceed 1 minute. For UL Commercial Burglar Alarm installations, total entry delay may not exceed 45 seconds.
- For UL Commercial Burglar Alarm and UL Residential Burglar Alarm installations with line security, total exit delay time must not exceed 60 seconds. For UL Burglar Alarm installations without line security, total exit delay time must not exceed 120 seconds.
- 3. The maximum number of reports per armed period (field *93) must be set to "0" (unlimited) for UL installations.
- 4. Periodic testing (see scheduling mode) must be at least every 24 hours.
- 5. Alarm Sounder plus Auxiliary Power currents must not exceed 600mA total for UL installations (Aux power 500mA max.).
- 6. All partitions must be owned and managed by the same person(s).
- 7. All partitions must be part of one building at one street address.
- 8. If used, the audible alarm device(s) must be placed where it/they can be heard by all partitions.
- 9. For UL commercial burglar alarm installations the control unit must be protected from unauthorized access. The tamper switch installed to protect the control unit enclosure door is suitable for this purpose.
- 10. Remote downloading without an alarm company technician on-site (unattended downloading) is not permissible for UL installations.
- 11. Auto-disarming is not a UL Listed feature.
- 12. As SIA limits for delay of alarm reporting and sounding can exceed UL limits for commercial and residential applications, the following UL requirements per UL681 are provided:

The maximum time that a control unit shall be programmed to delay the transmission of a signal to a remote monitoring location, or to delay the energizing of a local alarm sounding device to permit the alarm system user to enter and disarm the system, or to arm the system and exit shall not exceed:

a) 60 seconds for a system with standard line security or encrypted line security,

- b) 120 seconds for a system without standard line security or encrypted line security, or
- c) 120 seconds for a system that does not transmit an alarm signal to a remote monitoring location.
- 13. This control is not intended for bank safe and vault applications.

SIA Quick Reference Guide

- 1. *31 Single Alarm Sounding per Zone: If "0" selected, "alarm sounding per zone" will be the same as the "number of reports in armed period" set in field *93 (1 if one report, 2 if 2 reports, unlimited for zones in zone list 7).
- 2. *34 Exit Delay: Minimum exit delay is 45 seconds.
- 3. *35/*36 Entry Delay 1 and 2: Minimum entry delay is 30 seconds.
- 4. *37 Audible Exit Warning: Feature always enabled; field does not exist.
- 5. *39 Power Up in Previous State: Must be "1," power up in previous state.
- 6. *40 PABX Access Code or Call Waiting Disable: If call waiting is used, call waiting disable option in field *91 must be set.
- 7. *50 Burglary Dial Delay: Delay must be minimum of 30 seconds.
- 8. *59 Exit Error Alarm Report Code: Always enabled.
- 9 *68 Cancel Report Code: Default is "code enabled."
- 10. *69 Recent Closing Report Code: Always enabled.
- 11. *91 Option Selection: Exit Delay option should be enabled. If call waiting is used, Call Waiting Disable must be set to "1" (enabled).
- 12. *93 No. reports in Armed Period: Must be set for 1 or 2 report pairs.
- 13. Cross zone timer programming is set in field *85; cross zone pairs are assigned in zone list 4 using *81 Zone List mode.
- 14. Duress code is assigned by using the "add a user code" procedure found in the User Guide. Enable Duress code reporting by programming zone 92 using *56 Zone Programming mode.
- 15. Fire alarm verification is a built-in system feature when a zone is programmed for zone type 16.
