TESTING THE SYSTEM

Using the Test mode allows each detection point to be checked for proper operation. Testing should be conducted weekly to ensure proper operation.

- The keypad sounds a single beep about every 30 seconds as a reminder that the system is in the Test mode.
- Alarm messages are not sent to your Central Station while Test mode is on.
- If a problem is experienced with any detection point (no confirming sounds, no display), call for service immediately.
  1. Disarm the system and close all protected windows, doors, etc. The READY indicator light should come on if all zones are intact.
  2. Enter your 4-digit Master code. [ ] (D) walk
  3. Listen. The external sounder should sound for about 1 second then turn off. If the sounder does not sound, call FOR SERVICE. The “Test in Progress” display appears only on the keypad that started the test.
  4. Fault zones. Open each protected door and window in turn and listen for three beeps from the keypad. Each faulted detection point should appear on the display. The display clears when the door or window is closed.
  5. Walk in front of any interior motion detectors (if used) and listen for the display when it is activated. The display clears when no motion is detected. Note that if wireless motion detectors are used, there is a 3-minute delay between activations to conserve battery life.
  6. Test all smoke detectors, following the manufacturer’s instructions.
  7. When all detection points have been checked and are intact (closed), there should be no zone numbers displayed.
  8. Exit test mode: 4-digit code + [ ]

TROUBLE CONDITIONS

The word CHECK on the keypad’s display, accompanied by a “beeping” sound (closed), there should be no zone numbers displayed.

- When all detection points have been checked and are intact (closed), there should be no zone numbers displayed.
- Exit test mode: 4-digit code + [ ]

To silence the beeping for these conditions, press any key.

If this message remains displayed for more than 1 minute, CALL FOR SERVICE.

If only some lights are out on the premises, check each light fixture. If all lights are out, press the function key to control the system. Arranging some kind of regular service program with him is advisable. Your local Honeywell dealer is the person best qualified to service your system. The following is a list of some of the most common features and functions of your system.

- Several modes of burglary detection: Stay, Night-Stay, Away, Instant, Maximum.
- Bypass feature lets you bypass selected zones while leaving the rest of the system armed.
- Chime mode alerts you to the opening of protected doors and windows while the system is disarmed.
- Fire and carbon monoxide detection are always active (if installed), an alarm sounds if a fire or carbon monoxide condition is detected.
- Panic keys (if programmed) let you manually initiate fire and personal alarms using the keypad.
- 4-digit security codes are used in conjunction with keypad commands to perform system functions.
- Each user can be assigned a different security code, each with different authority levels.
- The system sensors have been assigned to various “zones,” which are specific areas of detection (e.g., front door, kitchen window, etc.).
- Zone numbers (points of detection) are displayed at the keypad when an alarm or trouble condition occurs.
- Partitions provide two independent areas of detection plus an optional common area. Each partition containing a group of zones that can be armed and disarmed without affecting other partitions.
- Function keys may have been programmed to perform various functions: Ask your installer if these keys are active.
- A Scheduling feature can be programmed to automatically perform certain functions (e.g., arm the system) at a predetermined time each day. See the full User Guide for details.

NOTES

- The system is in the Test mode.
- Alarm message is also sent (delayed 30 seconds by default to reduce false alarms).

NOTES ON BURGLARY DETECTION

- If you return to the premises and the main burglary sounder is on, or the keypad beeps rapidly upon entering the premises, it indicates that an alarm has occurred during your absence and an intruder may still be on the premises. LEAVE IMMEDIATELY and CONTACT THE POLICE from a nearby safe location.

NOTES ON FIRE AND CO DETECTION

- Your fire alarm system (if installed) is on 24 hours a day, for continuous detection. In the event of an emergency, the smoke and heat detectors sound their alarms, triggering a loud, interrupted pulsed sound from the Keypad(s) and any external sounders.
- You can silence the alarm at any time by pressing the OFF key (the security code is not needed to silence fires).
- Carbon monoxide (CO) detectors, if installed, provide continuous detection. If a high level of carbon monoxide is detected, an interrupted pulsed alarm sound occurs at the keypads and the detector(s) immediately move to a spot where fresh air is available, preferably outdoors. From a safe area, call your security service provider for further instructions. To silence the keypad, press the OFF key. To silence the detector, see its instructions.

SYSTEM BASICS

From a safe area, call your security service provider for further instructions. To silence the keypad, press the OFF key. To silence the detector, see its instructions.
Your installer assigned a master code that is used to perform all system functions. In addition, other security codes can be assigned for by other users.

- Only the System Master and Partition Master can assign security codes to users.
- Users are identified by 2-digit user numbers.
- The System Master can change partitions.
- In addition to a security code, each user is assigned an authority level and various system attributes. See the full User Guide for definitions of each Authority Level.
- Security codes can be used interchangeably within a partition when performing system functions (a system armed with one security code can be disarmed by a different security code), with the exception of the Guest and Arm Only codes.
- Security code programming involves these steps:
  1. Choose a user number from the set of users assigned to the partition in which the user will be operating, and assign a 4-digit security code.
  2. Assign an authority level to that user.
  3. Assign other attributes as necessary.

Assigning Security Codes and User Attributes

The following lists the various command strings for adding security codes and attributes:

- **NOTE:** Partition Master codes apply only to those user numbers previously assigned (by the system master/installer) to the partition master’s partition.

### SECURITY CODES

<table>
<thead>
<tr>
<th>Function</th>
<th>Commands</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Assigning Security Codes and User Attributes</strong></td>
<td>System Master code + [0] + new code + new code again</td>
</tr>
<tr>
<td><strong>Delete Security Code</strong></td>
<td>Master code + [0] + [user no.] + [0] + [0]</td>
</tr>
<tr>
<td><strong>Authority Level</strong></td>
<td>Master code + [0] + [user no.] + [0] + [auth. level]</td>
</tr>
<tr>
<td><strong>Access Group</strong></td>
<td>Master code + [0] + [user no.] + [0] + [group]</td>
</tr>
<tr>
<td><strong>User’s Partition</strong></td>
<td>System Master code + [0] + [user no.] + [0] + [part. level] + [part. level] + [part. level]</td>
</tr>
<tr>
<td><strong>RF User Number</strong></td>
<td>Master/Part. Code + [0] + [zone no.] + [0] + [zone no.] + [0] + [zone no.]</td>
</tr>
</tbody>
</table>

- **Paging On/Off**
  1. You can program a user to a message that is sent to a pager whenever this code is used to arm or disarm the system.
  2. Paging On/Off
  3. 0 = no paging for this user
